Pramod Chakraworty

Software Developer | React Native & Next.js

pramodchakraworty618@gmail.com | +91-7987311094 | linkedin.com/in/pramodchakraworty077 | Indore, India

PROFESSIONAL SUMMARY

Software Developer with 1.6 years of production experience building and shipping applications across mobile, tablet, web and desktop. Delivered React Native apps serving 20K+ users, with hands-on work in offline-first reader features (SQLite, offline downloads, offline dictionary), Firebase real-time chat, live streaming (Agora, AWS IVS) and payments (Stripe, in-app purchases). Owns the full release cycle, from architecture and native builds to Google Play, App Store, Microsoft Store and Mac App Store submissions.

TECHNICAL SKILLS

Mobile & Tablet: React Native, Expo, TypeScript, JavaScript (ES6+), React Navigation, responsive layouts, Android and iOS builds

State Management: Redux Toolkit, Context API, Zustand, React Query

Web: Next.js (App Router & Pages Router), React.js, HTML5, CSS3, Tailwind CSS, Shadcn/ui, Framer Motion, REST API integration

Desktop: Windows and macOS application builds, release preparation and troubleshooting

Offline & Local Data: SQLite, offline download workflows, local file storage, offline dictionary, reader functionality

Backend & Services: Node.js, REST APIs, WebSockets, Firebase (Auth, Firestore, Realtime Database, FCM, Analytics)

Payments & Streaming: Stripe, Apple Pay, In-App Purchases (iOS & Android), Agora SDK, AWS IVS

Tools & Deployment: Git, GitHub, GitHub Actions, Postman, Figma, Android Studio, Xcode, Google Play Console, App Store Connect, Microsoft Store

PROFESSIONAL EXPERIENCE

Software Developer (React Native & Next.js) | Ideal IT Techno Pvt. Ltd., Indore, India

On-site | 1.6 years

- Architected and shipped production React Native apps for Android and iOS using Redux Toolkit and TypeScript, collectively serving 20K+ active users with a modular, scalable architecture.
- Developed and maintained the Visualible Reader ecosystem across React Native mobile and tablet apps, a Next.js website, and Windows and macOS desktop applications.
- Implemented reader features including offline book downloads, local file handling, SQLite-based storage and an offline dictionary.
- Designed one-to-one, group and club chat on Firebase Realtime Database with FCM push notifications, driving high concurrent user engagement.
- Improved responsiveness through lazy loading, code splitting, memoisation and fewer render cycles, reducing redundant network calls.
- Reduced native bundle size using code splitting, asset compression and tree shaking to improve install conversion on both stores.
- Owned the mobile release pipeline: versioning, signing, build configuration and production deployments to Google Play, Apple App Store, Microsoft Store and Mac App Store across multiple concurrent projects.
- Investigated and resolved cross-platform issues with QA, including release preparation and post-build verification, using Git workflows and Postman for debugging and integration.

PROJECTS

Visualible Reader – Cross-Platform Reading Ecosystem

React Native (mobile & tablet) | Next.js website | Windows & macOS desktop | SQLite

- Built and maintained features for a digital reading experience across mobile, tablet, web and desktop, focusing on usability and a consistent reading experience.
- Implemented offline download functionality so downloaded books stay available without an internet connection.
- Used SQLite and local storage for on-device reader data, plus an offline dictionary for readers while disconnected.
- Supported production release workflows and store submissions for every platform.

LiveScorebyKickScore – Live Sports Score & Entertainment App

React Native | Expo | TypeScript | Redux Toolkit | Firebase | AdMob | Android, iOS, Web

- Sole developer of a cross-platform app delivering real-time football and basketball updates to 20K+ Android and 100+ iOS users via optimised API polling and efficient Redux Toolkit state management.
- Built a social layer with follow/following, personalised feeds and club-based communities that drives high daily active usage.
- Implemented Firebase chat (one-to-one, group, club) with FCM push notifications for real-time messaging.
- Integrated Firebase Analytics for behaviour tracking and Google AdMob for in-app ad monetisation.

Veels – OTT Streaming Platform

React Native | TypeScript | Redux Toolkit | Firebase | Agora SDK | AWS IVS | Stripe | Android & iOS

- Engineered a full-featured OTT app from scratch supporting movies, web series, music, podcasts and short-form video (Reels).
- Designed a dual live-streaming architecture: low-latency internal streaming with Agora SDK and scalable external broadcasting with AWS IVS.
- Built the monetisation stack: virtual gifting, Stripe bank integration, coin redemption and iOS/Android in-app purchases for premium content.
- Reduced content delivery latency by optimising media loading and caching; managed development, QA, submission and deployment on Google Play and the App Store.

IIT Abu Dhabi Career Platform – Career & Community Platform

Next.js | React.js | TypeScript | Firebase | OpenAI API | Tailwind CSS

- Contributed to a full-stack career platform with Firebase Realtime Database chat and FCM push notifications, sharing the messaging architecture used in the mobile apps.
- Integrated Firebase Auth for role-based access control (students, recruiters, admins) with JWT session management.

EDUCATION

B.Tech – Information Technology | University Institute of Technology (RGPV), Indore, India | July 2019 – June 2023

ACHIEVEMENTS

- **20K+ users milestone:** Sole developer who architected and shipped LiveScorebyKickScore, reaching 20K+ active Android users organically with zero paid acquisition.
- **Full product ownership:** Led end-to-end delivery of 3 production mobile apps at the same time, covering architecture, development, QA and store deployment.
